

**Steep
Ascension**

Both have something in common: a blamelessly manufactured casework made from massive aluminium, which gives an excellent impression and forms a solid and vibration-free foundation for drive and DAC.

The CD drive

CD Box RS is a toploading unit and its drive mechanism comes from the austrian specialist *Stream Unlimited*, who is responsible for the purity of audio signals.

But especially CD sound delivers the absolute top score. Playback is solid, articulate and has an amazing „analogue“ quality.

What additionally has to be mentioned is the Class-A headphone section. With a switch it can adapt to the headphone impedance (also acts as „tone“ control) and sounds really mighty. This is not only a nice add-on or a „less-than-ideal“ solution, you get a rich and crisp sound with perfect control.

2000 Euros is not cheap for both units, but you will get a drive/ converter package, which can not be beaten in terms of technique and given features which sounds absolutely brilliant. A successful step forward for Pro-Ject.
